Hiring Team
Atos Group
Taguig City, Philippines

Re: Test Analyst position — Ref. No. 547239

Dear Hiring Team,

I am writing to apply for the Test Analyst role at Atos Group (Ref. 547239). As a Junior Test Automation Engineer currently shipping test infrastructure for a high-scale Android consumer-fintech application, the responsibilities in the posting — translating requirements into test cases, building reusable automated scripts, defect triage, and regression testing — describe exactly the work I do every day.

At **Billease**, I have shipped **50+ merge requests and 30,000+ lines of code** expanding automated test coverage and infrastructure for the company's Android application. I engineered and now maintain the **CI/CD pipeline integrations** for the core regression and emergency-hotfix suites, ensuring every production release is validated against high-priority test cases. Acting as the final technical gatekeeper before deployment, I have discovered and resolved **30+ critical, high-impact defects** using Appium and BrowserStack, classifying each by severity and priority before handoff to engineering.

The technical scope you describe maps cleanly to my experience. I write test plans and reusable automated scripts daily; I perform UI and end-to-end regression testing on every code change; and I read both feature specifications and underlying application source as part of test design, giving me a black-box-plus-white-box view that catches defects pure black-box testing misses. My day-to-day stack centers on Appium with BrowserStack, but the underlying patterns — locator-based UI automation, BDD-style scenario structuring, parallel cloud execution, and CI-gated test stages — transfer directly to **Selenium and Cucumber**, both of which I am ready to ramp on quickly.

Beyond tooling, I value the collaborative posture this role emphasizes. I participate in code reviews, share test patterns with newer team members, and have led cross-functional teams — most recently as Project Manager for UPLB CS Society's 41st CS Week Code Wars, delivering three hours of zero-downtime live service for 20 teams and 3 judges. I am also integrating **AI-assisted tooling (Claude)** into our automation workflow, aligning with Atos Group's AI-first direction.

I would welcome the opportunity to discuss how my background fits the team. I can be reached at jetjetcerezo@gmail.com or +63 998 914 8907. Thank you for your time and consideration.

Sincerely,

Jet Timothy V. Cerezo
