WORK & ORGANIZATION EXPERIENCE

Bioinformatics Software Developer Intern | Thesis Affiliate 07/2024 – 05/2025
International Rice Research Institute (IRRI)

- Implemented a custom OAuth authentication flow for SNPseek within a Dockerized Drupal environment, improving secure user access and system integration.
- Designed and developed a MERN-based SNPseek platform using a microservices architecture, applying full-stack development techniques to enhance scalability, usability, and data processing efficiency.

41st Computer Science Week Code Wars Co-Head/Project Manager 10/2023 – 07/2025
UPLB Computer Science Society (UPLB COSS)

- Led a 7-member development team in enhancing a competitive programming event platform, overseeing feature development, bug tracking, testing, and deployment for optimized system performance.
- Successfully deployed and managed the platform, supporting 20 participating teams, 3 judges, and 3 continuous hours of live service with zero downtime.

EDUCATION

Bachelor of Science in Computer Science 09/2021 – 07/2025
University of the Philippines Los Baños

- Honor roll

STI College Calamba (STEM) 09/2019 – 06/2021

- with honors

SCHOLARSHIPS & SKILLS

Scholarships

Iskolar ng Laguna, UP SLAS

Skills

decision-making; version control; CLI; APIs; web development; Javascript; Python; C; C++; ReactJS; Flutter; CI/CD, Vercel, Railway, LLMs, HuggingFace, Kaggle

PROJECTS & HACKATHONS

Ottodot Assessment 10/2025 – 10/2025
Full Stack Developer

- Engineered and deployed a full-stack AI math problem generator within a 48-hour timeframe as part of a competitive technical assessment.

- Leveraged the Gemini API to deliver dynamic, grade-level appropriate problems and provide personalized student feedback, utilizing a modern stack of TypeScript, JavaScript, Vercel, and Supabase.

Maralit Dental Clinic Appointment System

08/2025 – Present

(Full Stack Developer)

- Developed a centralized appointment system based on MERN stack for a clinic with 3 locations in Los Banos with the goal of optimizing the staff workflow using modern web technologies.

Diet Plan Calculator

08/2025 – Present

(Full Stack Developer)

- Implemented a MERN based application that automatically generates diet plans based on accurate calculations, leveraging full-stack development techniques for continuous integration and deployment.

Codebreak 2.0 Champion

05/2025

(Full Stack Developer) - HACKATHON

- Developed a full-stack AI platform for customer support agents with a RAG-based assistant that generated live call scripts from past and current tickets, plus automated QA analytics after calls.
- Handled APIs, microservices, deployment, and AI integration to deliver an MVP system within 2 hours.

2 Weeks

08/2024

(Full Stack Developer)

- Created a responsive story game using ReactJS and Vercel with 2 members for a client in a span of 3 weeks.

PICSEL

02/2024 – 06/2024

(Backend Developer)

- Successfully integrated Google authentication to enhance security and streamline the user login process.
- Developed backend components for a reservation system with PostgreSQL, Express.js, Node.js, and React, contributing 9 commits and 12 merged pull requests to 7 features in a 20-developer team over 5 months.

eLBigayan

05/2024 – 06/2024

(Team Lead)

- Led a team of 2 members in developing a donation system, overseeing the entire development process.
- Utilized Flutter and Dart and integrated 4 Firebase services to create a secure, and scalable backend.

Fire Nation Invasion

04/2024 – 06/2024

(Game Developer)

- Worked with 2 members to develop key features, including character abilities and game mechanics.
- Implemented multiplayer feature that supports up to 4 players to connect and play from different computers.
